

The latest in a long line of access innovations

Since 1996, RehaMed International has led the way in redefining the market for aquatic lifting products.

RehaMed has pioneered the use of battery powered pool lifts, introduced the first completely portable pool lift, and developed the first multi-use pool lift

The PAL-Portable Aquatic Lift has become an industry standard, while our Splash series opened the door to accessibility for previously difficult pool designs.

Besides changing the way pool lifts operate, RehaMed has also changed the way they look. Attractive powder coated finishes have replaced traditional plain stainless steel, getting rid of the institutional appearance projected by competitive products.

The aXs is the next step in the evolution.

ATTRACTIVE • AFFORDABLE • ACCESSIBILITY

A New Dimension in Swimming Pool Accessibility

The aXs is specifically designed for both residential applications as well as hospitality and multi-unit facilities. It is a perfect solution for those who are seeking a sensible solution for providing access to their swimming pools for users with disabilities.

The aXs is easy to operate and maintain, is transportable, is reliable, and is priced to fit into any budget. In addition, the aXs features an attractive design which blends into any pool environment without projecting an institutional appearance.

Standing a mere 32 inches above the deck, the aXs provides 360° rotation to insure sufficient clear deck space for safe transfers on and off of the lift. The aXs is intended to be used with simple pool gutter configurations having a deck to water distance of no more than six inches.

The aXs is fabricated using both aluminum extrusions and stainless steel. All surfaces are treated with a tough and attractive powder coated finish to protect against prolonged exposure to the elements. Custom colors are available. The housing is formed from ABS plastic with an acrylic cap to minimize discoloration due to exposure to the sun.

With a lifting capacity of 300 pounds, the Basic versions of the aXs meets all Americans with Disabilities Act Accessibility Guidelines (ADAAG), and features our exclusive seating system. This system, designed by people with disabilities for people with disabilities, is wider and deeper than most conventional seats, and has no edges to restrict
